

### Download Accuterm

The latest version of Accuterm is Accuterm 8 and is available on the Zumasys.com website at: <https://www.zumasys.com/downloads/>

Download the Windows version to your computer and execute the installer by double clicking the downloaded file and follow the instructions for a normal install.

Once installed bring up the Accuterm 8 application. The Basic Connection Settings menu is displayed:

The values for this screen are:

Server type: Linux

Server Name or IP: Provided by Blue Sage

Port: Provided by Blue Sage

Terminal type: Dec VT220

TERM setting: This is unique for each PC Accuterm is installed in and is provided by Blue Sage Software.

## **Installing and Configuring Accuterm**

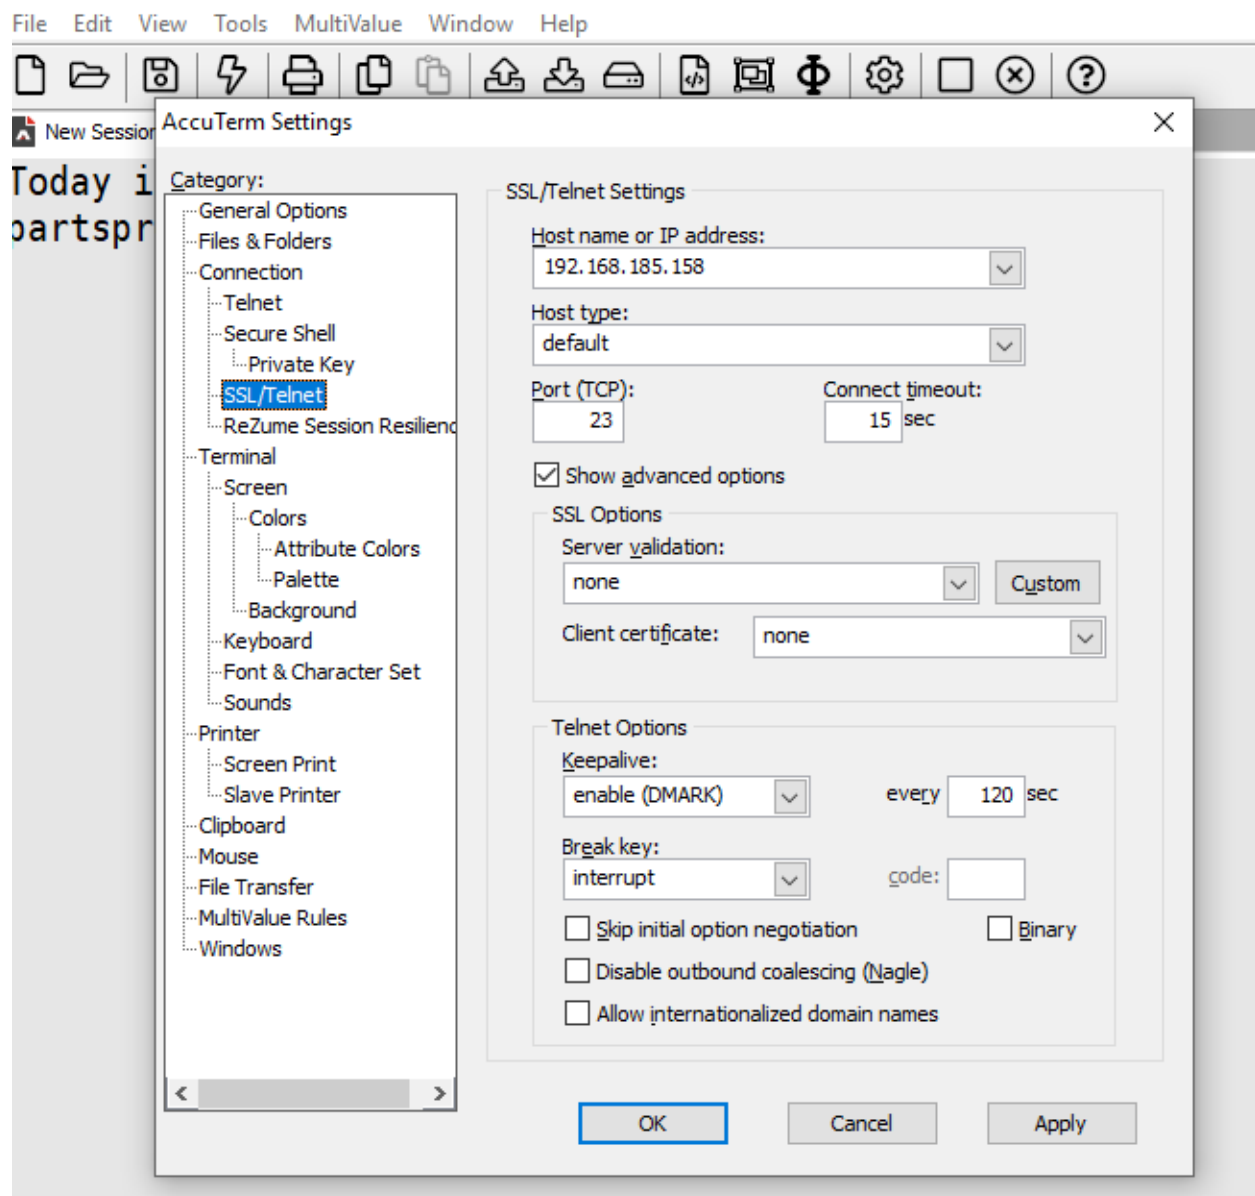

Once the settings in the menu are filled in select the Connect button and you should see a Linux login prompt.

At this point is select the File menu at the top of the screen and select Save As from the drop down menu. Save the settings to a location such as your desktop.

### Keep Alive

If you experience lockups when the terminal is idle for an extended period of time, you can turn on Keep Alive that will prevent the session from being terminated due to inactivity.

Select the Tools dropdown from the main screen and then select Settings. This will bring up the screen below. Click on the SSL/Telnet option then click on the Show advanced options. Set the Keepalive dropdown to enable (DMARK) as shown in the picture. Select Ok and save this using the File menu
